

KNX-basic courses

Modern KNX installations offer a broad spectrum for intelligent building projects. We are happy to pass on our more than 30 years of experience in technological development and in dealing with KNX devices to the participants through competent trainers.

In the KNX basic course, the participant acquires theoretical and practical basics in the planning and commissioning of KNX projects. The aim is to be able to plan and commission KNX projects independently and to carry out extensions and fault diagnostics. The practical and theoretical KNX certification exam takes place on the last day.

Lessons with KNX products from different manufacturers will show you the advantages of KNX building automation. Many practical exercises will help you to understand and consolidate the technical basics.

Training content

- Basics of communication with KNX Differences to conventional installation
- Application examples and product selection
- Group address, objects, block diagrams
- ETS6: Basics and settings, practical exercises
- Flags, data point types, telegram structure, priorities
- Bus access method, KNX topology, system components
- Optimised project planning
- Control of lighting, blinds, central functions, incl. commissioning
- Project documentation
- KNX RF - native KNX radio transmission, practical exercise
- Diagnostic functions of the ETS Professional
- Systematic error search and rectification: Installation, commissioning, project planning
- Testing according to KNX specifications: theory and practice
